Functionality Exploration

Documentation of functions

addCraftedItem

```
public static void addCraftedItem(int craftedItem)
```

Adds a crafted item to craftedItems.

This method adds a crafted item to craftedItems that are part of the players inventory.

Parameters:

`craftedItem` - The crafted item

clearScreen

```
private static void clearScreen()
```

Clears the screen.

This method clears the screen and uses different logic depending on the OS.

Catched Exceptions:

- On IOException: Prints stacktrace when I/O exception of some sort has occurred.
- On InterruptedException: Prints stacktrace when a thread is waiting, sleeping, or otherwise occupied, and the thread is interrupted, either before or during the activity.

craftedItemsContains

```
public static boolean craftedItemsContains(int craftedItem)
```

Queries craftedItems for an item.

This method queries the players crafted item inventory for an item.

Parameters:

`craftedItem` - The item to query the crafted item inventory for

Returns:

boolean true if craftedItems contains item, false in any other case

craftedItemsContains

```
public static boolean craftedItemsContains(int craftedItem,
                                            int count)
```

Queries craftedItems for if it has enough of an crafted item.

This method queries the players craftedItems for an crafted item and if it contains at least as much as the supplied count.

Parameters:

`craftedItem` - The crafted item to query the crafted items inventory for

`count` - The count that the crafted items inventory should contain of the item

Returns:

boolean true if craftedItems contains crafted item at least as many times as the supplied count, false in any other case

craftIronIngot

```
public static void craftIronIngot()
```

Crafts CRAFTED_IRON_INGOT.

This method crafts CRAFTED_IRON_INGOT from 3 IRON_ORE that is taken from the players inventory.

Prints message if the player doesn't have the correct items in his inventory.

craftIronPickaxe

```
public static void craftIronPickaxe()
```

Crafts CRAFTED_IRON_PICKAXE.

This method crafts CRAFTED_IRON_PICKAXE from 1 Stick and 3 Iron Ingots that are taken form the players inventory.

Prints message if the player doesn't have the correct items in his inventory.

craftItem

```
public static void craftItem(int recipe)
```

Crafts an item.

This method crafts an item from a recipe.

Prints message if invalid recipe was supplied.

Parameters:

`recipe` - The recipe used to craft the item

craftStick

```
public static void craftStick()
```

Crafts CRAFTED_STICK.

This method crafts CRAFTED_STICK from 1 WOOD that is taken from the players inventory.

Prints message if the player doesn't have the correct items in his inventory.

craftStonePickaxe

```
public static void craftStonePickaxe()
```

Crafts CRAFTED_STONE_PICKAXE.

This method crafts CRAFTED_STONE_PICKAXE from 1 Stick and 3 Stone that are taken form the players inventory.

Prints message if the player doesn't have the correct items in his inventory.

craftWoodenPlanks

```
public static void craftWoodenPlanks()
```

Crafts CRAFTED_WOODEN_PLANKS.

This method crafts CRAFTED_WOODEN_PLANKS from 2 WOOD that are taken from the players inventory.

Prints message if the player doesn't have the correct items in his inventory.

displayCraftingRecipes

```
public static void displayCraftingRecipes()
```

Prints crafting recipes.

This method prints the available crafting recipes.

displayInventory

```
public static void displayInventory()
```

Prints players inventory.

This method prints the players inventory including craftedItems.

displayLegend

```
public static void displayLegend()
```

Prints a legend.

This method prints a legend of items on the map.

displayWorld

```
public static void displayWorld()
```

Prints the world as ASCII text.

This method is responsible for displaying the world.

Part of secret door logic.

fillInventory

```
private static void fillInventory()
```

Fills players inventory with all blocks.

This method fills the players inventory with all available blockTypes.

Part of secret door logic.

generateEmptyWorld

```
private static void generateEmptyWorld()
```

Generates an empty world.

This method generates an empty world which only contains the dutch flag.

Part of secret door logic.

generateWorld

```
public static void generateWorld()
```

Generates the world.

This method uses randomness to generate a world out of different materials.

getBlockChar

```
private static char getBlockChar(int blockType)
```

Returns the symbol for blockType.

This method returns the mapped char for blockType.

Parameters:
`blockType` - The type of block

Returns:
char The mapped symbol for blockType

getBlockColor

```
private static String getBlockColor(int blockType)
```

Returns block color.

This method returns the blocks color.

Defaults to empty String

Parameters:
blockType - The type of block

Returns:
String The human readable name of craftedItem

getBlockName

```
private static String getBlockName(int blockType)
```

Returns human readable block name.

This method returns a human readable block name for blockType.

Defaults to "Unknown"

Parameters:
blockType - The type of block

Returns:
String The human readable block name.

getBlockSymbol

```
private static String getBlockSymbol(int blockType)
```

Returns the symbol and color for blockType.

This method returns the mapped char and blockColor for blockType.

Parameters:
blockType - The type of block

Returns:
String The mapped symbol and blockColor for blockType

getBlockTypeFromCraftedItem

```
private static int getBlockTypeFromCraftedItem(int craftedItem)
```

Returns the block type of craftedItem.

This method returns the block type of craftedItem.

Defaults to -1.

Parameters:
craftedItem - The crafted item

Returns:
int The block type of craftedItem

getCountryAndQuoteFromServer

```
public static void getCountryAndQuoteFromServer()
```

Gets country and quote from server.

This method gets country and quote from server via a POST request.

Catched Exceptions:
- On Exception: Prints an error for any encountered exception.

getCraftedItemColor

```
private static String getCraftedItemColor(int craftedItem)
```

Returns item color.

This method returns the items color.

Defaults to empty String

Parameters:
craftedItem - The crafted item

Returns:
String The human readable name of craftedItem

getCraftedItemFromBlockType

```
private static int getCraftedItemFromBlockType(int blockType)
```

Returns the crafted item of blockType.

This method returns the crafted item of blockType.

Defaults to -1.

Parameters:
blockType - The type of block

Returns:
int The crafted item of blockType

getCraftedItemName

```
private static String getCraftedItemName(int craftedItem)
```

Returns human readble item name.

This method returns a human readable item name for craftedItem.

Parameters:

`craftedItem` - The crafted item

Returns:

String The human readable name of craftedItem

getRequiredItemForMining

```
public static int getRequiredItemForMining(int blockType)
```

Returns the crafted item that is required to mine blockType.

This method returns the crafted item that is required to mine blockType.

Defaults -1.

Parameters:

`blockType` - The type of block

Returns:

int The crafted Item required to mine blockType

initGame

```
public static void initGame(int worldWidth,
                            int worldHeight)
```

Initializes the game.

This method sets worldWidth, JworldHeight, world, playerX, playerY and initializes inventory.

Parameters:

`worldWidth` - The width of world in blocks

`worldHeight` - The height of world in blocks

interactWithWorld

```
public static void interactWithWorld()
```

Handles interaction with the game world.

This method handles interaction with the game world and prints messages for blocks that the player can interact with. It also adds certain blocks to the players inventory if he interacts with them.

inventoryContains

```
public static boolean inventoryContains(int item)
```

Queries inventory for an item.

This method queries the players inventory for an item.

Parameters:

`item` - The item to query the inventory for

Returns:

boolean true if inventory contains item, false in any other case

inventoryContains

```
public static boolean inventoryContains(int item,
                                        int count)
```

Queries inventory for if it has enough of an item.

This method queries the players inventory for an item and if it contains at least as much as the supplied count.

Parameters:

`item` - The item to query the inventory for

`count` - The count that the inventory should contain of the item

Returns:

boolean true if inventory contains item at least as many times as the supplied count, false in any other case

loadGame

```
public static void loadGame(String fileName)
```

Loads the game.

This method loads the game from a file.

Parameters:

`fileName` - The file name

Catched Exceptions:

- On IOException: Prints error with message when I/O exception of some sort has occurred.
- On ClassNotFoundException: Prints error with message when no definition for the class with the specified name could be found.

lookAround

```
private static void lookAround()
```

Prints all blocks sorrounding the player.

This method prints all blocks sorrounding the player. This is meant to make the players life easier.

main

```
public static void main(String[] args)
```

Main method.

This method is called upon execution of the game.

Parameters:

`args` - The supplied commandline arguments

mineBlock

```
public static void mineBlock()
```

Mines a block.

This method mines a block and adds it to the players inventory if it is not AIR.

movePlayer

```
public static void movePlayer(String direction)
```

Moves the player

This method moves the player UP/DOWN/LEFT/RIGHT depending on the supplied direction.

Parameters:

`direction` - The direction the player should be moved towards.

placeBlock

```
public static void placeBlock(int blockType)
```

Places a block.

This method places a block that is of blockType 0 to 9 and removes it from the players inventory if the players inventory contains that block.

Parameters:

`blockType` - The type of block

removeItemFromCraftedItems

```
public static void removeItemFromCraftedItems(int craftedItem,
                                              int count)
```

Removes a count of item from craftedItem.

This method removes a count of an item from the players crafted items inventory.

Parameters:

`craftedItem` - The item to remove from the crafted items inventory

`count` - The count that should be removed from the crafted items inventory

removeItemsFromInventory

```
public static void removeItemsFromInventory(int item,
                                            int count)
```

Removes a count of item from inventory.

This method removes a count of an item from the players inventory.

Parameters:

`item` - The item to remove from the inventory

`count` - The count that should be removed from the inventory

resetWorld

```
private static void resetWorld()
```

Resets the world to an empty world.

This method resets the world to an empty world via generating an empty world and resetting the players position.

Part of secret door logic.

saveGame

```
public static void saveGame(String fileName)
```

Saves the game.

This method saves the game in a file.

Parameters:

`fileName` - The file name

Catched Exceptions:

- On IOException: Prints error with message when I/O exception of some sort has occurred.

startGame

```
public static void startGame()
```

Starts the game.

This method handles the following:

- Printing of initial UI, instructions and informational messages
- Player input
- Secret door logic

Part of secret door logic.

waitForEnter

```
private static void waitForEnter()
```

Waits for input ENTER.

This method waits for player to input ENTER.

Additional Info

See Appendix for flowcharts and pseudocodes of 16 functions.

Finite State Automata (FSA) Design

Secret door logic (boolean secretDoorUnlocked)

General description

The secret door logic is triggered when `<boolean> secretDoorUnlocked` is true and will replace the map with an empty map containing a dutch flag. It will also replace the green player symbol with a blue one.

The `<boolean> secretDoorUnlocked` is true if the player supplies the following input in order:

1. `y` (caseless check)
2. Nothing OR anything other than `exit` (caseless check)
3. `unlock` (caseless check)
4. Nothing OR anything other than `exit` (caseless check)
5. Mandatory `a`, `c` AND `m` plus optional `y` AND/OR `unlock` in any order (caseless check, repetition is possible)
6. Nothing OR anything other than `exit` (caseless check)
7. `open` (caseless check)

After point 7, the `<boolean> secretDoorUnlocked` is true and the secret door logic triggers.

Git Collaboration & Version Control

Overview

- [UM Gitlab Repository, Branch Group 18](#)
- Changes & Conflicts
    - Merge conflicts were handled efficiently and quickly. As a team we all had our experiences with these conflicts, one example was that a local repository was a few key commits behind. This was solved by choosing what parts of the code to keep, and what parts of the code needed to be replaced by the newer version on the repository.
    - Some other issue we faced was not being able to merge in the first place, which was inevitably resolved by re-cloning the repository and pasting in our modified files, which we wanted to replace older files on the remote repository.

Who did what?

Task	Who worked on the task	Participation in percentages
Creating the initial pseudocode and flowcharts	Leopold Anton Tristan Sian	Even across all participants
Setting up the Gitlab repository	Leopold	100%
Creating the documentation for the JavaCraft code	Leopold Anton Tristan Sian	Even across all participants
Creating the flowchart and pseudocode for the global game	Tristan	100%
Creating FSA for automaton	Leopold Tristan	90% 10%
Creating the table for automaton	Leopold	100%
Converting ODF Flowcharts to .graphml	Tristan	100%
Deciding on the uniform format for the flowcharts	Leopold Anton Tristan Sian	Even across all participants
Deciding on the uniform format for the pseudocode	Leopold Anton Tristan Sian	70% 10% 10% 10%

Task	Who worked on the task	Participation in percentages
Converting flowcharts to uniform format	Sian Tristan Anton	80% 10% 10%
Converting pseudocode to uniform format	Leopold	100%
Updating the documentation	Leopold	100%
Cleaning up the repository folders	Sian	100%
Exporting flowcharts to SVG format	Sian	100%

Appendix

void clearScreen()

Java

```java
private static void clearScreen() {
    try {
        if (System.getProperty("os.name").contains("Windows")) {
            new ProcessBuilder("cmd", "/c",
"cls").inheritIO().start().waitFor();
        } else {
            System.out.print("\033[H\033[2J");
            System.out.flush();
        }
    } catch (IOException | InterruptedException ex) {
        ex.printStackTrace();
    }
}
```
Pseudocode

```
BEGIN

TRY TO
    IF current operating system matches Windows
        Clear screen using Windows cmd.exe by calling "/c cls";
        Wait on process to finish;
    ELSE
        Clear screen using ANSI code;
ON EXCEPTION
    PRINT ERROR containing `stacktrace`;

END
```

Flowchart
void craftIronIngot()

Java

```java
public static void craftIronIngot() {
    if (inventoryContains(IRON_ORE, 3)) {
        removeItemsFromInventory(IRON_ORE, 3);
        addCraftedItem(CRAFTED_IRON_INGOT);
        System.out.println("Crafted Iron Ingot.");
    } else {
        System.out.println("Insufficient resources to craft Iron Ingot.");
    }
}
```

Pseudocode

```
BEGIN

IF `<list> inventory` contains at least 3 iron ore
    Remove 3 iron ore from `<list> inventory`;
    Add the crafted item 1 iron ingot to `<list> inventory`;
    PRINT INFO "Crafted Iron Ingot.\n";
ELSE
    PRINT WARNING "Insufficient resources to craft Iron Ingot.\n";

END
```

Flowchart

Start

If the inventory contains iron ore (3)

False → Print "Insufficient resources to craft Iron Ingot."

True

Remove iron ore (1) from the inventory

Add iron ingot (1) to the inventory

Print "Crafted Iron Ingot."

void craftItem(int recipe)

Java

```java
public static void craftItem(int recipe) {
    switch (recipe) {
        case 1:
            craftWoodenPlanks();
            break;
        case 2:
            craftStick();
            break;
        case 3:
            craftIronIngot();
            break;
        case 4:
            craftStonePickaxe();
            break;
        case 5:
